(54) DATA-REPRODUCING DEVICE,
DATA-REPRODUCING METHOD, RECORDING
MEDIUM AND DATA STRUCTURE

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a data-reproducing device, that can discriminate the propriety of reproduction of digital data consisting of 1st data part which includes attribute information and a 2nd data part, in succession to the 1st data part and resulting from multiplexing compression coded audio and video data, when receiving the 1st data part.

SOLUTION: An analysis means 105, that receives the

1st data part in the digital data and analyzes the 1st data part, has the function of detecting a data structure, having a predetermined value from the 1st data part and stops the operation of a reception means 101, when it detects no data structure.
